

```
public class Example {  
  
    public Example()  
    {  
        this(10);  
        System.out.println("This is a default constructor");  
    }  
    public Example(int x)  
    {  
        this(10,5);  
        System.out.println(x);  
    }  
    public Example(int y,int z)  
    {  
        int sum=y+z;  
        System.out.println(sum);  
    }  
  
    public static void main(String[] args) {  
        Example e=new Example();  
    }  
}
```

## Output

```
15  
10  
This is a default constructor
```
