

```

public class Charactercount {

    public static void main(String[] args) {
        String str = "My name is aadith";
        str=str.toUpperCase();
        char[] ch = str.toCharArray();
        int i=0,j=0;
        for(i=0;i<ch.length;i++)
        {
            int count=1;
            for(j=i+1;j<ch.length;j++)
            {
                if(ch[i]==ch[j] && ch[i]!=' ')
                {
                    count++;
                    ch[j]='0';
                }
            }
            if(count>1 && ch[i]!='0')
            {
                System.out.println(ch[i]+"="+count);
            }
        }
    }
}

```

## Output

```

M=2
A=3
I=2

```
