```java
interface demo
{
      default void display()
      {
            System.out.println("This is a default method");
      }
}
class demo1 implements demo
{
      public void display()
      {
            System.out.println("This is a overidden method");
      }
}
public class Defaultdemo {

      public static void main(String[] args) {
            demo obj=new demo1();
            obj.display();

      }

}
```

Output

```
This is a overidden method
```
